EXAMINER

LU, C CAIXIA

ART UNIT	PAPER NUMBER
----------	--------------

1713

DATE MAILED: 03/21/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

<b>Office Action Summary</b>	<b>Application No.</b> 10/669,223	<b>Applicant(s)</b> KERNS ET AL.	
	<b>Examiner</b> Caixia Lu	<b>Art Unit</b> 1713	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☐ Responsive to communication(s) filed on \_\_\_\_.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-36 is/are pending in the application.  
     4a) Of the above claim(s) 1,3-12 and 14-25 is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 2,13 and 26 is/are rejected.
- 7) ☒ Claim(s) 27-36 is/are objected to.
- 8) ☒ Claim(s) 1-35 are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
     Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
     Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).  
     a) ☐ All    b) ☐ Some \*    c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.

## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1, 3-12, and 14-25, drawn to a polymerization process, classified in class 526, subclass 173.
  - II. Claims 2, 13, 26-36, drawn to a polydiene elastomer, classified in class 526, subclass 340.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the polydiene elastomer can be prepared by a materially different process wherein a different lithium initiator is used.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Art Unit: 1713

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

6. This application contains claims directed to the following patentably distinct species of the claimed invention: (i) lithium initiators, (ii) functional monomers, and (iii) diene polymers including copolymer of diene and functional monomer and terpolymer of diene, functional monomer and styrene.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claim 2 is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record

Art Unit: 1713

showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

7. During a telephone conversation with Attorney Alvin Rockhill on March 15, 2005 a provisional election was made with traverse to prosecute the invention of Group II wherein the functional monomer is defined in claim 13 and the diene polymer is defined in claim 36, claims 2, 13 and 26-36. Affirmation of this election must be made by applicant in replying to this Office action. Claims 1, 3-12 and 14-25 withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

***Claim Rejections - 35 USC § 112***

9. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

10. Claims 2, 13, and 26-36 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Art Unit: 1713

Claim 2

Line 6, the description of "polydiene repeat units" is somewhat improper and should be replaced with --diene repeat units--.

Claim 29

The limitation of "a number average molecular weight of at least 55 percent" does not have a logic flow. It seems that applicants are intended to further limit the vinyl microstructure percentage rather than the molecular weight.

***Claim Rejections - 35 USC § 102***

11. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

12. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

13. Claims 2, 13, and 26 are rejected under 35 U.S.C. 102(e) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Rodewald et al. (US 6,627,721).

The instant claims are directed to a vinyl polydiene comprising repeat units derived from a conjugated diene, a functionalized monomer such as N-

Art Unit: 1713

methylpyrrolidino-substituted styrene and vinyl aromatic such as styrene, wherein at least 50 percent of the repeat units derived from the diene monomers have vinyl microstructure, the polydiene has a weight average molecular weight of at least 300,000, a polydispersity of at least 1.2, and a ratio of radius of gyration to weight average molecular weight of greater than 0.078 nm<sup>2</sup>/mol/kg.

Rodewald's Example C (col. 25 and Table 1 of cols. 27-28) demonstrates a batch solution polymerization processes at 65°C for the preparation of terpolymers of butadiene, styrene and N-methylpyrrolidino-substituted styrene with n-BuLi as the initiator and tetramethylethylenediamine (TMEDA) as the polar modifier. The terpolymer of Example D has a molecular weight of 306,900 and a polydispersity of at least 1.22 which are in the ranges of the instant claims.

It is noted that the prior art example does not disclose all the claimed limitations such as the percentage of vinyl microstructure among the butadiene repeat units and the ratio of radius of gyration to weight average molecular weight. However, the terpolymer is prepared in the presence of polar modifier of TMEDA which promotes the formation of the vinyl microstructure among the butadiene repeat units in the same manner as TMEDA of the instant application, therefore, one would have expect the percentage of vinyl microstructure among the butadiene repeat units to be in the range of the instant claims considering the polymerization condition used. One would have also expected that Rodewald's batch polymerization performed at relative low temperature of 65°C would allow almost all of the n-BuLi immediately reacted with butadiene and styrene to form allylic and benzylic lithium propagation species and

Art Unit: 1713

eventually form the terpolymer with little branch formation, and the polymers with little branches are expected to have a ratio of radius of gyration to weight average molecular weight in the range of the instant claims.

Once a product appearing to be substantially identical is found and a 35 USC 102/103 rejection made, the burden of proof is shifted to the applicant to show an unobvious difference. In re Fitzgerald, 205 USPQ 594. In re Fessmann, 180 USPQ 324. Applicants have not met their burden to demonstrate an unobvious difference between the claimed product and the products of the prior art examples.

***Allowable Subject Matter***

14. Claims 27-36 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form to include all of the limitations of the base claim and any intervening claims and to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

The instant claims further limit the polydispersity of the vinyl polydiene to be at least 1.3.

Rodewald's copolymers being prepared in the batch process with the alkyl lithium initiator in general are expected to have narrow polydispersities which should be very close to 1.0 due to the uniformed initiation of the polymerization condition. Therefore, it would not have been obvious to prepare a vinyl polydiene with polydispersity as high as 1.3 according to Rodewald's teaching.

Art Unit: 1713

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Caixia Lu whose telephone number is (571) 272-1106. The examiner can normally be reached from 9:00 am to 5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful and the matter is urgent, the examiner's supervisor, David Wu, can be reached at (571) 272-1114. The fax numbers for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (571) 272-1700.
